# **MaxiCut**<sup>®</sup>

MaxiCut® combines cut protection with comfort, flexibility and dexterity for dry environments.

## **TECHNOLOGIES INSIDE**

#### Comfortable cut protection

Cut protection is the most challenging aspect of glove technology. However, theoretical protection does not necessarily translate into practical benefits if wearer comfort is compromised.

Our CUTtech® technology is used to create carrier materials that provide the desired cut protection while remaining stretchable and flexible without breaking, enhancing the wearer experience. We meticulously build the fiber bundles ourselves, this way we can perfectly match them to our coating. For maximum cut protection, we use UHMWPE, glass, Kevlar® and metal fibers which we combine flexible nylon, elastane and polyester yarns to create a high-performance material.

Additionally, we reinforce the area between thumb and forefinger with a special nitrile patch to enhance the gloves' durability.

CUTtech® – optimum cut resistance through to innovative fiber construction.

## 360° Breathable

**360° breathability** - Our patented micro-foam coating channels moisture and heat away from your skin to maintain an optimal hand temperature so you can work productively.

For a greater cooling effect look to use our AD-APT® Technology which works in conjunction with AIRtech®.

### Reduces hand fatigue

Form, fit and feel - mimics the "hand at rest", reducing hand fatigue and increasing comfort.

Latest knitting technology - utilized to produce smooth and rounded fingertips, improving fingertip sensitivity.

**Consistent liner penetration** - from the nitrile, leaving only the soft liner resting against the skin.

### For a secure grip

**Optimized grip** - delivered through our micro-cup finish, allows for a controlled grip. GRIPtech® decreases hand fatigue and increases

## **CLEANLINESS GUARANTEED**

We use our HandCare® Program for every single ATG® product. Not only do we make certain that all the elements used in our manufacturing process are safe for our employees, we also wash all the gloves after the production process as a further step in ensuring cleanliness. During this laundering process, we prefer the use of water that is rain-harvested, treated and continually recycled from our own water treatment facilities.

This enables us to guarantee our gloves to be "Fresh out of the pack" which is certified by Oeko-Tex® according to Standard 100. We do not use any SVHC during our manufacturing process.

And if that wasn't enough our gloves are also dermatologically accredited by the Skin Health Alliance. The Skin Health Alliance seal gives, for the first time in the safety industry, professional glove users the confidence that ATG®,s full range of gloves are "dermatologically safe" and the science and research behind them is robust.

More information about HandCare® by ATG® is available at <a href="https://www.atq-glovesolutions.com">www.atq-glovesolutions.com</a>.
